

Operating System Installation Guide

This is the latest version of Android Upgrade being made available. It can be very useful if the Operating System of Zinglife ZL101 gets corrupted.

The first thing you must do is to “put your Tablet on charging”..... It is most important that the tablet should be in charging mode during the update, otherwise it will cause permanent damage to the processing chip. Do not, under any circumstances, turn-off the tablet during the update.

Please follow the below steps carefully:

- (1) Download the ‘Upgrade Software’ from our website. A zip file will be downloaded.
- (2) Extract the zip file through WinZip. A folder by the name of “zt-update” will be extracted.
- (3) Copy the entire “zt-update” folder to a MicroSD card, and put the card into Zinglife Tablet in the appropriate slot.

- (4) Keep the ‘Back Button’ pressed, and turn-on the device.

- (5) The software installation will start automatically and will continue for few minutes. Please don't turn-off the device during the installation, nor press any button.
- (6) Once the installation is complete, the device will automatically boot-up.

Enjoy your Zinglife Tablet. Some of your personal settings may be changed to default factory settings.
