

Operating System Installation Guide

This is the complete software build, to be used if the Operating System of Zinglife ZL1024N gets corrupted.

The first thing you must do is to “put your Tablet on charging”..... It is most important that the tablet should be in charging mode during the update, otherwise it will cause permanent damage to the processing chip. Do not, under any circumstances, turn-off the tablet during the update.

Please follow the below steps carefully:

- (1) Download the ‘Upgrade Software’ from our website. A zip file will be downloaded.
- (2) Extract the zip file through WinZip. A folder by the name of “ZL1024N_OS22” will be extracted.
- (3) Copy all the files from this folder to a MicroSD Card.... Remember just the files, not the folder.
- (4) Insert the SD card into Zinglife Tablet in the appropriate slot provided on the right side.
- (4) Keep the ‘Volume Up’ button (on the left side) pressed, and turn-on the device.
- (5) The software installation will start automatically. First the boot-up logo will appear, and then a message conveying that upgrade has started. Once such message appears, you can leave the “Volume Up” button.
- (6) The installation will continue for few minutes. Please don’t turn-off the device during the installation, nor press any button.
- (6) Once the installation is complete, the device will automatically turn off.

Enjoy your Zinglife Tablet. Some of your personal settings may be changed to default factory settings.
